                                                                                                                                                                                The present invention provides the protein and coding sequences of human PRO proteins. These are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder, including cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The present sequence is a coding sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                          Baker KP,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          antiangiogenic, hypotensive, vulnerary and antiarteriosclerotic activities, and can be used in gene therapy. The PRO polynucleotides, proteins, agonists and antagonists are useful for treating or diagnosin a cardiovascular, endothelial or anglogenic disorder in a mammal, e.g. cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, angina, myocardial infarctions, thrombophiebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            carcinoma) and wound healing. The PRO polynucleotides have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. ABL88259 to ABL88267 represent primers and probes used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ABL88072 to ABL88258 encode the PRO proteins given in ABB84817 ABB85003. The PRO proteins and polynucleotides have cardiant, cantiangiogenic, hypotensive, vulnerary and antiarregrosclerotic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               One hundred and eighty seven nucleic acids encoding useful in diagnosis and treatment of cardiovascular infarction), endothelial or angiogenic disorders in

The SRCL-P1 polypeptide has a collectin-like structure. They are useful in clarifying the functions of macrophages and basal immunity. They are also useful in the treatment, prevention, diagnosis and investigation of diseases such as arteriosclerosis, diabetic complications, bacterial infection and restenosis following angioplasty, which are associated with accumulation of oxidized low density

                                                                                                                                                                                                                                              В
                                                                                                                                                                                                                                                                            Qγ
                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                               Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome cc and gene mapping, and in recombinant production of (II). The cc and gene mapping, and in recombinant production of (II). The cc and gene mapping, and in recombinant production of (II). The cc polynucleotides are also used in diagnostics as expressed sequence tags (C for identifying expressed genes. (I) is useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating (I) imaging of sites expressing (II). (I) and (II) are useful for treating (I) consists involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in C diagnostics, forensics, gene mapping, identification of mutations (I) and (I) are useful to assess biodiversity and to produce other types of data and products dependent on DNA and C amino acid sequences. AAS64197-AAS94564 represent novel human C diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at fifth the printed specification.

The SRCL-P1 polypeptide has a collectin-like structure. They are useful in clarifying the functions of macrophages and basal immunity. They are also useful in the treatment, prevention, diagnosis and investigation of diseases such as arteriosclerosis, diabetic complications, bacterial infection and restenosis following angioplasty, which are associated with accumulation of oxidized low density inpoprotein and the binding of advanced glycation end-products into

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence encodes the human cellular stress response 3 (CSR3) protein of the invention. The CSR proteins are macrophage scavenger receptor proteins. The CSR proteins can be used in the treatment, gene therapy and diagnosis of diseases in which intracellular stress is important, such as arteriosclerosis, diabetic circulatory obstruction, and microbial infection. Expression of the proteins is induced in vivo in response to intracellular stress, and inhibits cell death as a result of such stress.

The CSR proteins are macrophage scavenger receptor proteins. The CSR proteins can be used in the treatment, gene therapy and diagnosis of diseases in which intracellular stress is important, such as arteriosclerosis, diabetic circulatory obstruction, and microbial infection. Expression of the proteins is induced in vivo in response to intracellular stress, and inhibits cell death as a result of such stress.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cellular stress response protein; CSR1; CSR2; CSR3; human; macrophe scavenger receptor protein; intracellular stress; arteriosclerosis; diabetic circulatory obstruction; microbial infection; ss.

          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
